

SARA DAHB

— FULL STACK DEVELOPER

INTRODUCTION

High-achieving Full-Stack Software Engineer and FinTech Specialist bridging complex business operations with clean, enterprise-grade software solutions. Graduated with First-Class Honors (Very Good) in Commerce (English Section), leveraging a solid foundation in accounting, financial auditing, and corporate banking (CIB, NBE, Banque Misr). Accelerated technical expertise through the Information Technology Institute (ITI), specializing in Laravel, SQL Database Architecture, JavaScript, HTML5/CSS3, and WordPress Development. Proven track record in architecting real-world ERP systems, B2G contract management, and leading large-scale cross-functional teams.

BACKGROUND

Education

(01)

Software Engineering Intensive Program — ITI
Information Technology Institute (ITI) | Grade: Distinction (A)

- Track: Web Development & Software Fundamentals
- Core Stack: Full-Stack Foundations, Database Architecture (SQL), Laravel, PHP, JavaScript (ES6+), and WordPress Development

(02)

Bachelor of Commerce — Faculty of Commerce (English Section)
Aswan University | Graduated: 2025

- Grade: Very Good with Honors
- Focus: Financial Accounting, Auditing & Corporate Finance Logic.

WHO I AM

Personal Skills

(01)

Business & Financial Logic Analysis

(02)

Analytical & Strategic Problem Solving

(03)

Cross-Functional Team Leadership

(04)

High Attention to Detail & Quality Control

(05)

Active Listening & Requirements Gathering

(06)

High-Pressure Performance & Crisis Management

(07)

Process Automation & Efficiency

(08)

Effective Communication & Stakeholder Management

(09)

Fast Learner & Adaptive Mindset

WHAT I BUILD WITH

Technical Skills

skill_01.js

Frontend Fundamentals

HTML5, CSS3, JavaScript (ES6+), Responsive Web Design, Bootstrap / Tailwind

skill_02.js

Backend Development

PHP, Laravel Framework, RESTful APIs, OOP Architecture

skill_03.js

CMS & E-Commerce

WordPress Development, Theme & Plugin Customization, Web Performance Optimization

skill_04.js

Database Architecture

MySQL / SQL Databases, Database Normalization, Relational Schema & CRUD Operations

skill_05.js

Version Control & Tooling

Git, GitHub, VS Code, Postman API Testing

skill_06.js

Business & Domain Logic Integration

ERP Architecture, Financial & Accounting Workflows, Automated Billing Systems

HOW I CAN HELP

Services

(01)
Front-End Web Development
Building responsive, pixel-perfect, and modern user interfaces using HTML5, CSS3, JavaScript (ES6+), and Bootstrap / Tailwind.

(02)
Back-End Systems & APIs
Developing robust server-side architecture, secure RESTful APIs, and core business logic using PHP and the Laravel framework.

(03)
Full-Stack Web Applications
Delivering end-to-end custom software solutions—seamlessly connecting optimized SQL databases to modern dynamic interfaces.

(04)
Database Architecture & SQL
Designing normalized MySQL database schemas, complex query optimization, and structured relational data systems.

(05)
Custom WordPress Development
Crafting tailored WordPress sites, custom themes, performance tuning, and speed optimization for tourism and business platforms.

(06)
Business Logic & ERP Integration
Translating financial workflows, automated invoicing, legal management, and operational auditing into functional software.

SELECTED WORK

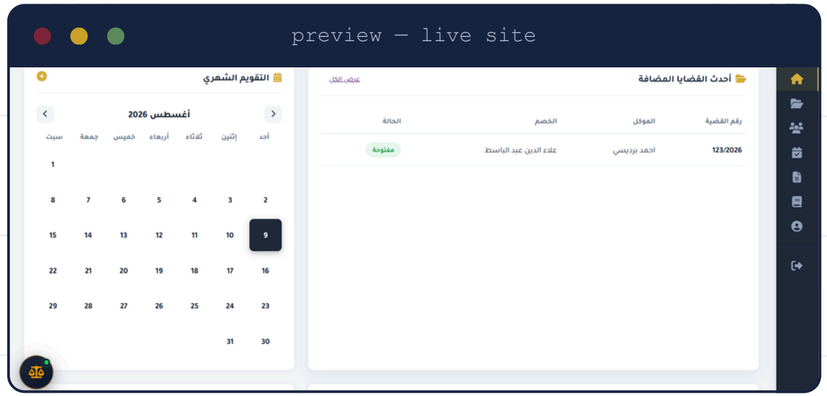

Projects

A curated set of case studies — the problem, the approach, and the result.

(01) PROJECT

Al-Mizan (الميزان) — Legal Practice & ERP Management System

OVERVIEW

Architected and engineered a comprehensive Legal ERP platform tailored for law firms to digitize case workflows, client tracking, and legal session agendas. The system automates financial billing, power-of-attorney archives, and internal staff permission controls to replace traditional paper-based auditing with a seamless digital ecosystem.

THE CHALLENGE & SOLUTION

The Challenge: Law firms face severe operational bottlenecks due to scattered paper files, unrecorded financial installments, missed court session deadlines, and lack of data security across legal associates.
The Solution: Engineered a centralized relational database architecture using Laravel & MySQL. Implemented Role-Based Access Control (RBAC) to ensure confidentiality, automated session date reminders, and integrated a financial ledger module for precise revenue and debt tracking.

TECH STACK

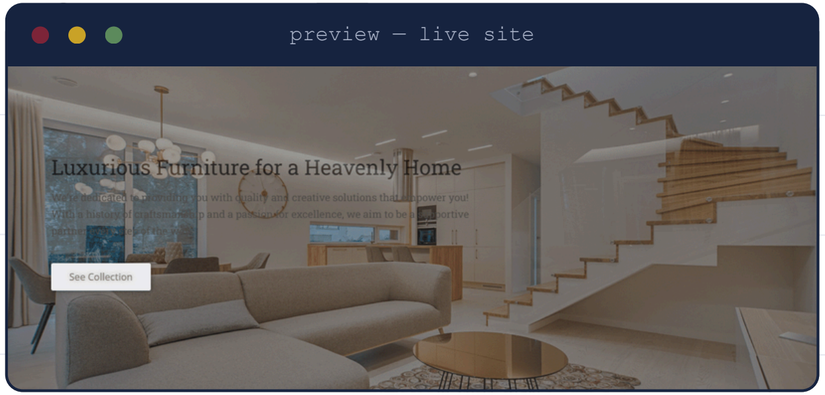

- Laravel (PHP) (Backend Logic & Framework)
- MySQL (Relational Database Architecture & SQL queries)
- JavaScript (ES6+) & HTML5/CSS3 (Interactive UI & Styling)
- Git & GitHub (Version Control, Branching & Code Repository)

ROLE

Full-Stack Engineer & Lead Business Analyst

(02) PROJECT

Soft Haven — Premium Furniture E-Commerce Platform

OVERVIEW

Architected and developed Soft Haven, a high-end, responsive E-Commerce web store designed for luxury furniture and interior concepts. Built on WordPress and WooCommerce, the platform features dynamic product variations, customized checkout flows, secure payment integration, and tailored UI components to elevate brand aesthetics and boost online conversion rates.

THE CHALLENGE & SOLUTION

The Challenge: Premium furniture retail requires high-resolution visual storytelling without compromising page speed load, complex multi-attribute product variations (materials, dimensions, colors), and seamless cart/checkout UX for high-ticket items.

The Solution: Customized a lightweight WordPress architecture optimized for speed and SEO. Configured advanced WooCommerce plugins for dynamic variations, built custom CSS/JS styling for an ultra-clean UI, and integrated automated inventory management with multi-currency readiness.

TECH STACK

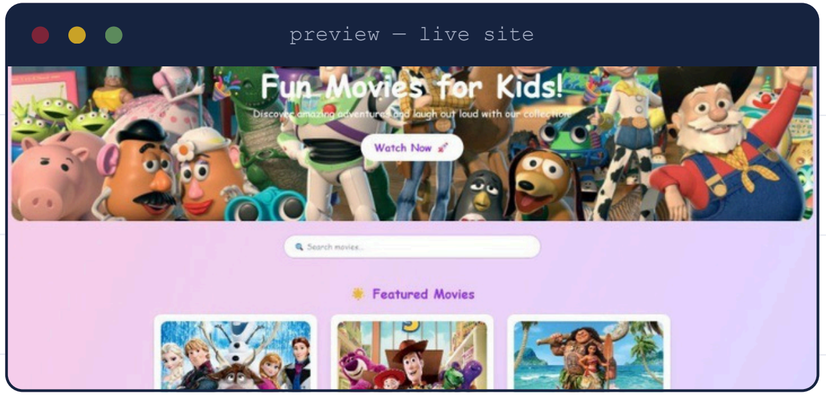

- WordPress & WooCommerce (Core CMS & E-Commerce Engine)
- Elementor Pro / Custom PHP (Layout & Dynamic Templating)
- HTML5, CSS3 & JavaScript (Custom Styling & UI Interactions)
- Plugins Suite (WP Rocket, Elementor, WooCommerce Extra Options, Yoast SEO)

ROLE

WordPress & E-Commerce Developer

(03) PROJECT

Kids Movies — Interactive Animation & Entertainment Platform

OVERVIEW

Engineered Kids Movies, a fun, vibrant, and highly accessible web streaming interface specifically designed for children of all age groups. Built entirely with native Front-End technologies, the platform features child-friendly UI components, smooth animation navigation, dynamic category filtering, and a real-time search engine for effortless movie discovery.

THE CHALLENGE & SOLUTION

The Challenge: Designing digital interfaces for kids requires balancing high visual engagement and playful aesthetics with strict simplicity, minimal cognitive load, and zero-friction navigation for young non-tech users.

The Solution: Developed a clean DOM manipulation logic using Vanilla JavaScript to handle multi-attribute category filtering (by age group, genre, and popularity) and dynamic live search. Crafted a custom responsive layout with CSS3 animations, high-contrast color palettes, and large interactive touch targets.

TECH STACK

- HTML5 (Semantic Structure & Accessibility / ARIA)
- CSS3 (Flexbox/Grid, Child-Friendly Styling & UI Animations)
- JavaScript (ES6+) (DOM Manipulation, Dynamic Filtering & Live Search)
- Git & GitHub (Version Control & Code Hosting)

ROLE

Front-End Developer & UI/UX Designer
